PRODUCT CONCEPT

DREAM THREAD

The living memory of your dreams.

An AI-powered dream journal that remembers, connects and explores the stories hidden across your own dream history.

Capture Connect Reflect

THE BIG IDEA

Every new dream becomes another chapter. DreamThread finds recurring people, places, emotions and storylines - then helps users explore what has changed, with evidence from their own entries.

BEST APPS & AGENTS TRACK • NVIDIA NEMOTRON + NEBIUS TOKEN FACTORY

THE OPPORTUNITY

Dreams are remembered in fragments.

DreamThread turns isolated entries into a growing, evidence-linked personal archive - without claiming to decode the subconscious.

TODAY

A user types a strange dream, gets one generic interpretation, and forgets it.

WITH DREAMTHREAD

The same dream becomes part of a connected story that can grow with future entries.

THE CORE PROMISE

01

REMEMBER

Save the original dream, its emotions and personally meaningful details.

02

CONNECT

Find recurring symbols and relationships across distant dream entries.

03

REFLECT

Explore tentative interpretations, changes and cited source evidence.

Audience: people who remember dreams, enjoy reflective journaling, or want to explore recurring dream patterns. Positioning: a dream memory and reflection companion - not a therapist, diagnostic tool or dream prophecy engine.

PRODUCT CAPABILITIES

Eight connected experiences

A small set of distinctive features working as one coherent journey, not a collection of unrelated AI tricks.

01 MVP

Dream Capture + Interpretation

Record by text or voice; save original wording and explore possible themes with uncertainty clearly labeled.

02

Dream Interviewer

Receive one thoughtful follow-up question so interpretations reflect the user's own associations.

03 MVP

Personal Symbol Memory

Remember user-confirmed associations such as “this house reminds me of my grandmother.”

04 MVP

Dream Continuity Engine

Find related dreams, compare changing details and update recurring storylines with citations.

05 MVP

Dream Constellation

Explore a clickable network of dreams, settings, characters, emotions and connection evidence.

06

Dream Storylines

Collect recurring settings and characters into a chronological sequence of dream chapters.

07 MVP

Dream Detective

Ask historical questions and receive multi-dream answers grounded in saved entries.

08

Insights + Time Capsule

Review recurring motifs, mood trends and retrospective stories across months.

ILLUSTRATIVE STORYLINE

Sarah and the mysterious house

A simple example of how recurring dream details form a story over time.

WEEK 1

THE FIRST DREAM

Experience: Sarah dreams of a dark forest, an abandoned house and a person at the window. She records her story by voice.

AI response: DreamThread saves the original account, notes “fear,” and asks whether the house feels familiar.

WEEK 3

A FAMILIAR DETAIL

Experience: In another dream, she enters an old house and hears somebody calling her name.

AI response: The agent finds a possible connection and shows both quotes. Sarah confirms the houses feel the same.

MONTH 2

THE STORY CHANGES

Experience: Sarah returns to a similar house, but it is bright and she feels calm rather than afraid.

AI response: DreamThread highlights the changing emotional arc without claiming to know its cause.

MONTH 3

THE BIGGER PICTURE

Experience: Sarah asks: “How has the house changed across my dreams?”

AI response: Dream Detective compares her entries, cites them and asks a useful reflection question.

MAGICAL MOMENT: DreamThread does not just interpret the latest dream. It notices how earlier dreams relate to it and how the storyline evolves.

EXPERIENCE DESIGN

A calm ritual, not a complex workflow

The user starts in seconds. The intelligence unfolds progressively as their dream archive grows.

01

WELCOME

A quiet home screen invites a user to “Record last night’s dream.” A lightweight onboarding explains privacy.

02

CAPTURE

Speak or type naturally. The original dream is stored unedited, along with a date and optional emotion tags.

03

REFLECT

Nemotron proposes several possible themes and asks one contextual question; the user can skip or correct it.

04

DISCOVER

A new entry triggers a background comparison with past dreams. Relevant links appear with quoted evidence.

05

EXPLORE

Tap a constellation node or open a storyline to see related dreams and how details changed over time.

06

RETURN

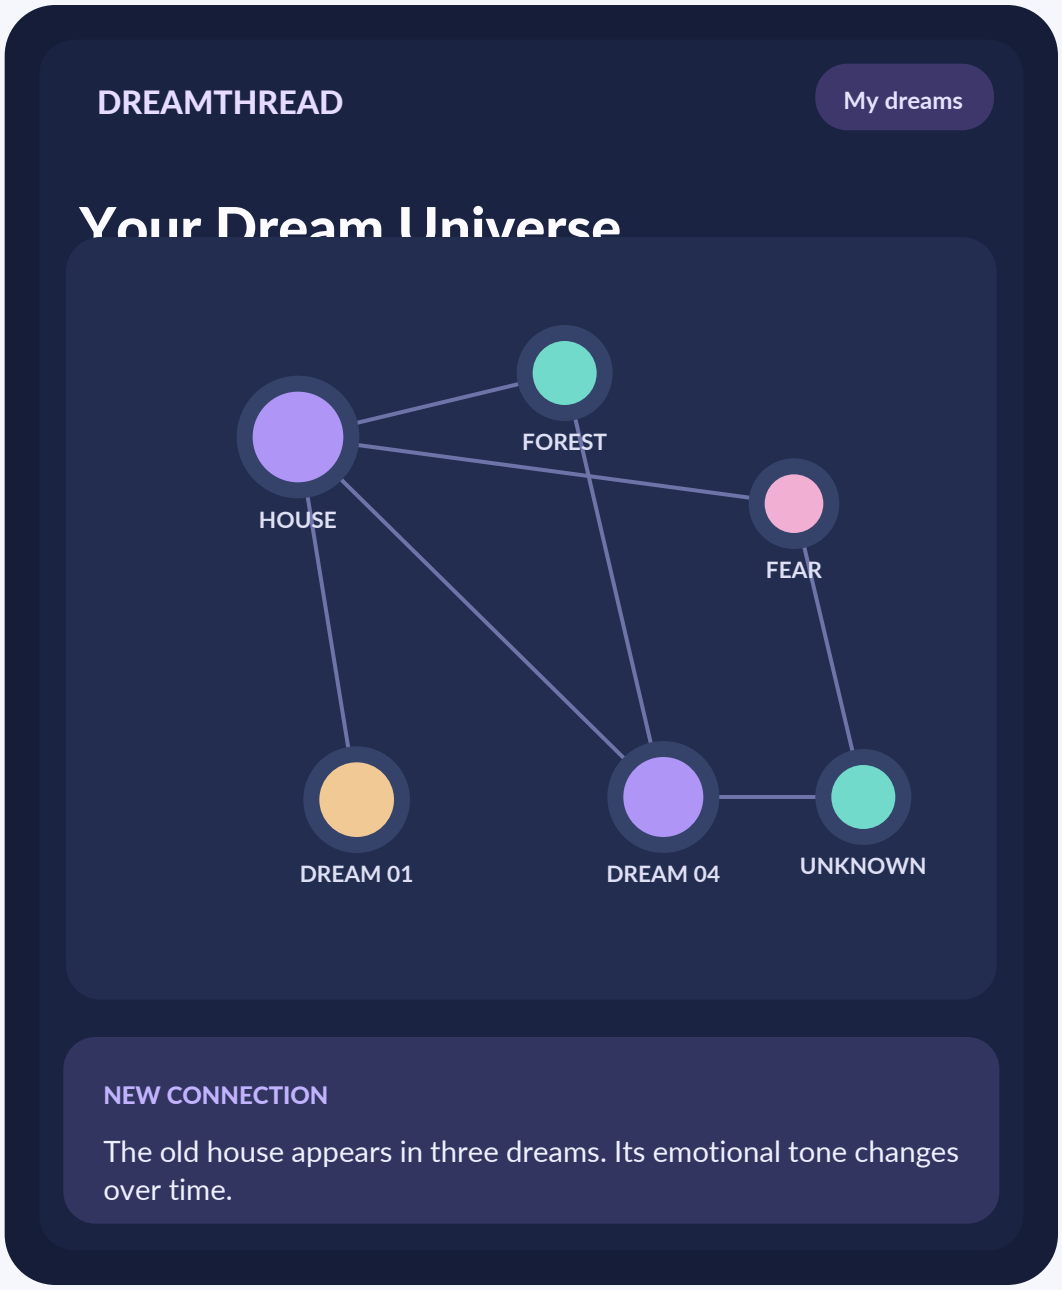

Ask Dream Detective a question or revisit a monthly summary. Every answer links to saved source entries.

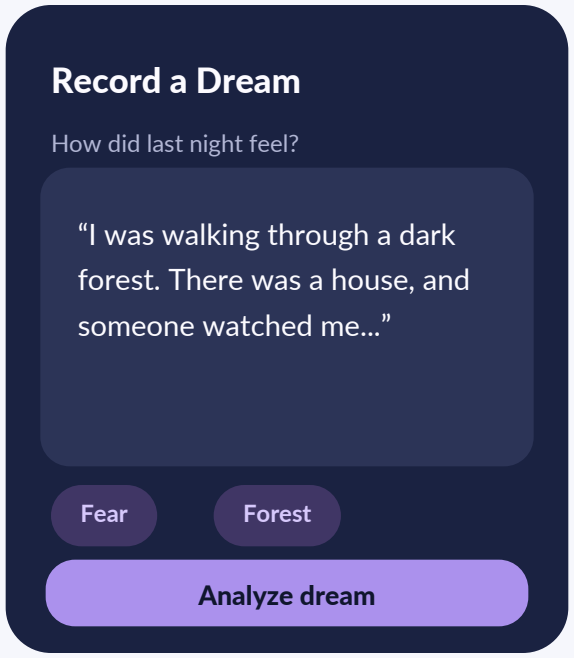

UX principle: Progressive depth - the journal is simple on day one, and the dream universe becomes richer only when it has real history to show.

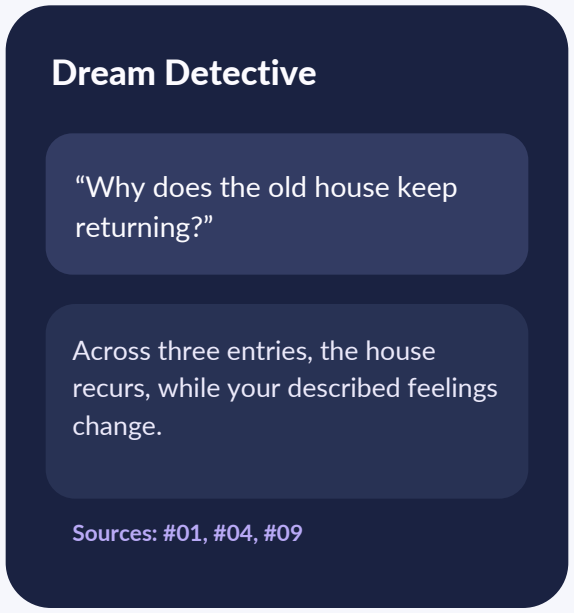

ILLUSTRATIVE UI MOCKUPS

Three screens, one visual language

Dark atmospheric canvases, gentle lavender highlights, readable typography and visible source references.

Interface behavior: The constellation animates subtly, connection lines are clickable, and every AI insight opens its supporting dream entries. Reduced-motion and readable light-mode options remain available.

THE SIGNATURE INNOVATION

The Dream Continuity Engine

Every new dream triggers a real sequence of retrieval, reasoning, verification and memory updates.

1

CAPTURE + STRUCTURE

Keep the original dream intact. Extract locations, people, events and reported feelings.

2

SEARCH MEMORY

Retrieve potentially relevant past dreams using semantic similarity and stored motif relationships.

3

REASON ACROSS DREAMS

Nemotron compares changes, identifies continuity and forms tentative interpretations.

4

CHECK THE EVIDENCE

Validate dream IDs and quotes; separate direct observations from speculative interpretations.

5

UPDATE THE UNIVERSE

Store approved links, storylines, user corrections and the reasoning trail for future use.

Why this is agentic: The model does not answer in isolation. It plans and performs sequential tool-backed steps against persisted user data, then verifies what it claims.

ART DIRECTION

A notebook inside a night sky

A distinctive visual identity can make the product emotional and immersive while preserving the clarity of a serious software tool.

Dream Rose
#F1B0D3

Cloud
#F6F7FC

Soft glow. Clear meaning.

A magical atmosphere should support the content, never compete with it.

Dream Constellation

INTERFACE PRINCIPLES

01 **Calm first**
One dominant action on every screen.

02 **Evidence visible**
Links and original quotes are never hidden.

03 **Gentle motion**
Slow orbit / glow; reduced-motion support.

04 **Private by default**
Clear, respectful handling of intimate writing.

NVIDIA X NEBIUS IMPLEMENTATION

Designed to be a real AI system

The essential hackathon integration is NVIDIA open-source inference served through Nebius Token

FRONTEND

Next.js + TypeScript - journal, Dream Constellation, chat, insights and user-approved memory corrections.

APPLICATION

FastAPI - orchestration, access controls, tool use, structured model outputs and evidence verification.

NEBIUS TOKEN FACTORY

NVIDIA open-source Nemotron models perform the core reasoning on Nebius-hosted inference.

Nemotron 3 Nano

Fast extraction and categorization

Nemotron 3 Super

Cross-dream reasoning and tool planning

POSTGRESQL + PGVECTOR

Dream entries, user memory, relationship graph and semantic retrieval.

EVIDENCE + SAFETY LAYER

Quote checks, user correction, permissions, deletion and privacy safeguards.

IMPORTANT IMPLEMENTATION NOTES

The above is a proposed architecture, not a claim that it is already deployed. Verify model availability in your Nebius account. Keep API keys server-side; allow users to export and delete their data; never treat dream interpretation as medical diagnosis or future prediction.

HACKATHON DELIVERY

One unforgettable live demonstration

Ship the smallest complete experience that proves memory, agentic reasoning, visual design and real Nebius integration

MUST-SHIP MVP

- Dream capture + thoughtful interpretation
- Cross-dream retrieval, comparisons and verified links
- Persistent dream storage and personal associations
- Interactive constellation + Dream Detective with sources

THREE-MINUTE JUDGING DEMO

0:00	Introduce Sarah and the dream journaling problem
0:25	Record a dream; show extraction and interpretation
0:55	Reveal a connection to an older saved dream
1:30	Show the evolving house storyline on the constellation
2:10	Ask Dream Detective; open its actual cited sources
2:40	Show Nemotron on Nebius + explain impact

WHY JUDGES SHOULD CARE

Technology: retrieval + multi-step Nemotron reasoning.
Design: immersive but usable journal.
Impact: find motifs users might miss.
Originality: interpretations evolve with evidence.

SUBMISSION READY

Live demo URL, public GitHub repo + open-source license, clear README, project description, public video under 3 minutes, and feedback on Nebius/NVIDIA tools.
